

Take Action: SCHOOL MEAL PROVIDERS

School food services can be 'learning laboratories' where students have the opportunity to learn about, experiment with and develop skills for healthy eating.

Did you know?

- Nearly half of all teenage girls do not eat the minimum number of servings from any of the four food groups.¹
- More than half of all teenage boys do not eat the minimum number of servings of vegetables and fruit or milk products.¹
- Students say the major barriers to healthy eating at school are the lack of available, affordable and appealing foods.^{2,3,4,5}
- Overall diet quality, specifically fruit and vegetable consumption and lower fat intake, are important to academic performance.⁶

What can YOU do to support a healthy school nutrition environment?

Make the healthy choice the easy choice.

- Provide a variety of healthy foods and beverages that are tasty and appealing and reflect students' preferences and cultural backgrounds.
- Offer healthy choices from the four food groups from *Canada's Food Guide*.
- Use recipes from *Bake Better Bites* when making muffins, scones, cookies, squares, cakes, cupcakes, breads and pancakes.
- Offer quick "to-go" specials that reflect all four food groups (e.g. subs with cheese; greens and chicken on a whole grain bun with a piece of fresh fruit and water; rice bowl with a stir-fry and yogurt for dessert).
- Make healthy foods and beverages more visible by placing them at eye level.
- Provide appropriate serving sizes; don't 'super-size'. Items like cookies and muffins are often double or triple the portion size recommended in *Canada's Food Guide*.
- Offer salad dressings on the side.

Support what your colleagues are teaching in nutrition and physical education.

- Coordinate activities with teachers and offer foods that promote healthy eating.
- Decorate eating areas with educational posters and table tents.
- Conduct promotions and events that support healthy choices.
- Post “Nutrition Facts” about foods served (<http://www.healthyeatingisinstore.ca>).

Provide opportunities for students, families and staff to get involved.

- When you have a new menu item, involve business teachers and students in marketing it through posters, contests and school announcements.
- Involve students and parents in selecting and evaluating provided foods and beverages.
- Establish a student advisory council to taste-test new foods and recipes, to suggest how to improve the meals and eating areas, and to offer ideas for attracting more customers.
